
1. Identification of academic tools (Databases)
Scopus
PubMed
OpenAlex
Records identified from databases
Scopus = 1,235
PubMed = 549
OpenAlex = 190
Total = 1,974 records
After deduplication: title-and-abstract screening
7 survey papers
75 primary studies
Full-text assessment 7 survey papers
Excluded 2
5 survey papers
75 primary studies
2. Snowballing (References & citations)
From references and citations of seed papers (75 + 5)
Combined pool after snowballing
537 records
Including the 75 original studies
Duplicates 412
After deduplication
125 unique records
75 original + 50 additional
75
50
Title-and-abstract screening
50 additional records
7 retained
Excluded 43 records
Full-text eligibility assessment
82 papers
75 original + 7 additional
Excluded 61 papers
3. Identification of commercial tools (TopAI.tools)
TopAI.tools
Tools identified using keywords
(literature review, systematic literature review, survey generation, search engine, writing assistant)
70 tools
1) Description screening
Descriptions and advertised functionalities
2) Documentation assessment
Official documentation, technical reports, user manuals, blogs and tutorials
Excluded across both stages 56 tools
Commercial tools included
14
Academic tools included
21
Selected through full-text eligibility assessment
Commercial tools included
14
Identified from TopAI.tools and verified through documentation
Total tools included in the study: 35 (21 academic + 14 commercial)
Academic papers (identification/screening)
Commercial tools (identification/screening)
Excluded commercial tools
Excluded papers/surveys/duplicates
Final included tools
